

additional concerns are as follows

: Regarding Lighting towers that's are already installed at this premises, concerns are that the towers admit a high level of light into my property illuminating my property to a nuisance level as well impacting the surrounding wild life that inhabit my property as well as the proposed development

:Regarding Use of the carpark that is outside of the compound.

I believe there is enough room inside the compound for a visitor carpark thus making an addition for a walkway not necessary. A carpark outside of the compound would create nuisance noise and emissions levels to my property.

:Regarding a green verge for the [REDACTED] fence line adjoining my property to the existing property.

I would like to see if the proposed development is granted a well planned and planted green verge of natives & endemic groups of plants planted to act as a screening, habitat and noise reducing, as well as enhancing the appearance of both properties. Which I would like to be involved with of choice of plant etc.

All of these requests would help with the wellbeing of both properties and existing wildlife that inhabit these properties.
