SURVEY REPORT

The purpose of this Survey is to realign the boundary between Lots 148 and 149 on RP738167 to remedy an encroachment.

The Datum for the survey was established between the original marks located at Stations 1, 2, 4, 5 and 6 on Buchanan Creek Road. A shortage of 0.035m was observed between Stations 3 & 4. An excess of 0.054m was observed between Stations 5 & 6.

Stations 8 & 9 were fixed using the original secants from the original marks located at Stations 8a & 9a. The resulting line between Stations 8 & 9 was observed to be -0°20'40" in bearing and the distance is -0.153m to the original plan dimensions. The large discrepancies between the observed marks at Stations 8a & 9a and to those shown on RP738167 appear to be an error on the survey plan as there is good agreement between the marks between Stations 5-8a and Stations 9a and 16. The resulting alignment of Wattle Close between Stations 4 & 8 and Stations 5 & 8a is deed bearing and in excess of 0.023m.

Station 16 was fixed using the recent OP (Plastic Peg) located at this corner. The origin of this mark is unknown. The alignment of Wattle Close between Stations 9 & 16 was proportioned for distance and bearing between the corners. The resulting lines are -0°00'10" in bearing and the distances between Stations 9-10 and 10-16 are in excess by 0.019m and 0.017m respectively.

Station 10a was fixed using the original secant dimensions from Station 10. The resulting line between Stations 9a & 10a is parallel to the Northern side of Wattle Close and in excess by 0.020m. The OIP's at Stations 11 & 12 have been re-referenced accordingly as the reinstatement of Wattle Close on IS180851 did not locate the OIP at Station 9a.

Station 7 has been fixed using the remains of the OP at this corner. Deed distance has been maintained between Stations 7 & 8 and an excess of 0.023m was observed between Stations 4 & 7.

Station 15 has been fixed by maintaining deed bearings from Stations 7 and 10 to intersect at this corner. The resulting line between Stations 7 & 15 was observed to be short by 0.18m. This is due to the discrepancies between the marks at Stations 8a & 9a. The line between Stations 10 & 15 was observed to be short by 0.013m.

There are a number of OIP's shown on this plan as "not found" as I believe that these pins were never placed on the original survey. There are also a number of recent OP's located as part of this survey and their origin is unknown.
