The attached plans illustrate:

- Site plan, indicating the location of the proposed buildings; and,
- Architectural plans including floor plans and elevations.

3.0 Level of Assessment

The proposed development is 'assessable development' under the Douglas Shire Planning Scheme and as defined in the Planning Act 2016.

Under the provisions of the Planning Act and the Douglas Shire Planning Scheme, the following level of assessment is applicable, in accordance with the IDAS process:

- 'Code Assessable' – Material Change of Use for the purpose of a house within the Environmental Management Zone

4.0 Planning Considerations

The Planning Act 2016, provides a legislative framework within Queensland for local and state authorities to assess development applications. Relevant matters within the Planning Act with respect to the application are considered below.

4.1 Douglas Shire Planning Scheme Code Assessment

Table 2 provides an assessment of the proposal with regard to the Douglas Shire Planning Scheme's associated Codes. The proposal generally complies with the Acceptable Solutions of the Scheme.

PERFORMANCE OUTCOMES	ACCEPTABLE OUTCOMES	COMMENTS
PO1 The height of all buildings and structures is in keeping with the natural characteristics of the site. Buildings and structures are low-rise and not unduly visible from external sites.	AO1.1 Buildings and structures are not more than 8.5 metres and two storeys in height. Note – Height is inclusive of the roof height. AO1.2 Buildings have a roof height not less than 2 metres.	The proposed development complies as it has a maximum height of approximately 5m.
PO2 Buildings and structures are set back to: (a) maintain the natural character of the area; (b) achieve separation from neighbouring buildings and from road frontages.	AO2 Buildings and structures are set back not less than: (a) 40 metres from the frontage of a state controlled road; (b) 25 metres from the frontage to Cape Tribulation Road; (c) 6 metres from any other road; (d) 6 metres from the side and rear boundaries of the site.	The proposed setbacks comply with the Acceptable Outcomes.
PO3 Development is consistent with the purpose of the Environmental management zone and protects the zone from the intrusion of inconsistent uses.	AO3 Inconsistent uses as identified in Table 6.2.4.3.b are not established in the Environmental management zone.	The use is not inconsistent.

A02 Emergency Services and uses providing community support services are not located in a bushfire hazard sub-category and have direct access to low hazard evacuation routes.	NA
P03 Development involving hazardous materials manufactured or stored in bulk is not located in bushfire hazard sub-category.	A03 The manufacture or storage of hazardous material in bulk does not occur within bushfire hazard sub-category.	NA
PO10 Development is located and designed to ensure proposed buildings or building envelopes achieve a radiant heat flux level at any point on the building or envelope respectively, of: (k) 10kW/m ² where involving a vulnerable use; or (l) 29kW/m ² otherwise. The radiant heat flux level is achieved by separation unless this is not practically achievable. Note - The radiant heat levels and separation distances are to be established in accordance with method 2 set out in AS3959-2009.	AO10 Buildings or building envelopes are separated from hazardous vegetation by a distance that: (m) achieves a radiant heat flux level of at any point on the building or envelope respectively, of 10kW/m ² for a vulnerable use or 29kW/m ² otherwise; and (n) is contained wholly within the development site. Note - Where a separation distance is proposed to be achieved by utilising existing cleared developed areas external to the site, certainty must be established (through tenure or other means) that the land will remain cleared of hazardous vegetation. For staged developments, temporary separation distances, perimeter roads or fire trails may be absorbed as part of subsequent stages. Note - The achievement of a cleared separation distance may not be achievable where other provisions within the	The proposed development has sufficient separation distances from vegetation so as to achieve compliance.

Further, the area between the development and road boundary is clear of vegetation.</p>

	(z) if a fire trail, has an access easement that is granted in favour of Council and Queensland Fire and Emergency Services.	
PO12 All premises are provided with vehicular access that enables safe evacuation for occupants and easy access by fire fighting appliances.	AO12 Private driveways: (aa) do not exceed a length of 60m from the street to the building; (bb) do not exceed a gradient of 12.5%; (cc) have a minimum width of 3.5m; (dd) have a minimum of 4.8m vertical clearance; (ee) accommodate turning areas for fire-fighting appliances in accordance with Queensland Fire and Emergency Services' Fire Hydrant and Vehicle Access Guidelines; and (ff) serve no more than 3 dwellings or buildings.	Proposal complies.
PO13 Development outside reticulated water supply areas includes a dedicated static supply that is available solely for fire fighting purposes and can be accessed by fire fighting appliances.	AO13 A water tank is provided within 10m of each building (other than a class 10 building) which: (gg) is either below ground level or of non-flammable construction; (hh) has a take off connection at a level that allows the following dedicated, static water supply to be left available for access by fire fighters: (i) 10,000l for residential buildings Note – A minimum of 7,500l is required in a tank and the extra 2,500l may be in the form of accessible swimming pools or dams. (ii) 45,000l for industrial buildings; and (iii) 20,000l for other buildings;	It is proposed to provide sufficient water storage to comply with this Acceptable Outcome. However, water supply is to be provided via above ground plastic tank/s as with 99% of the of properties not on a reticulated water supply.

	<p>(ii) includes shielding of tanks and pumps in accordance with the relevant standards;</p> <p>(jj) includes a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;</p> <p>(kk) is provided with fire brigade tank fittings – 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines; and</p> <p>(ll) is clearly identified by directional signage provided at the street frontage.</p>	The tank/s will have top access for a suction line.
<p>PO14 Landscaping does not increase the potential bushfire risk.</p>	<p>AO14 Landscaping uses species that are less likely to exacerbate a bushfire event, and does not increase fuel loads within separation areas.</p>	Noted.
<p>PO15 The risk of bushfire and the need to mitigate that risk is balanced against other factors (such as but not limited to, biodiversity or scenic amenity).</p>	+	Noted.

 - (b) for an appeal against a deemed refusal—at any time after the deemed refusal happens; or
 - (c) for an appeal against a decision of the Minister, under chapter 7, part 4, to register premises or to renew the registration of premises—20 business days after a notice is published under section 269(3)(a) or (4); or

Note — See the P&E Court Act for the court's power to extend the appeal period.

 - (a) the adopted charge itself; or
 - (b) for a decision about an offset or refund—

 - (ii) the cost of infrastructure decided using the method included in the local government's charges resolution.
