Assessment Manager Conditions & Advices

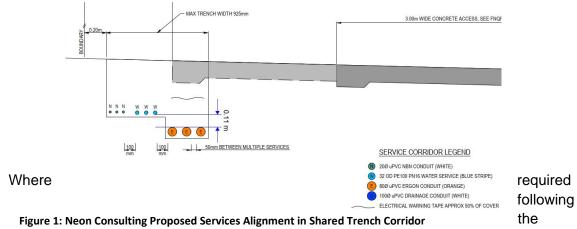

- 1. Carry out the approved development generally in accordance with the approved drawing(s) and/or document(s), and in accordance with:
 - The specifications, facts and circumstances as set out in the application submitted to Council: and
 - The following conditions of approval and the requirements of Council's Planning Scheme and the FNQROC Development Manual.

Timing of Effect

2. The conditions of the Development Permit must be effected prior to the lodgement for the signing and dating of the Survey Plan except where specified otherwise in these conditions of approval.

Service Clearances

3. Prior to the Pre-Start Meeting, confirm the alignment of services within the shared trench corridor in accordance with the requirements of the Water Services Association of Australia (WSA) to the satisfaction of the Chief Executive Officer. Advice Note: Neon Consulting Drawing 026-2301-01-DRG-0006 indicates NBN conduits and water services are aligned at the same depth and 100mm apart. WSA is interpreted as requiring a minimum of 150mm vertical clearance and 300mm horizontal clearance. In addition, 110mm clearance is interpreted between water services and Ergon conduits, (refer figure below). WSA requires a minimum of 225mm vertical clearance and 500mm horizontal clearance.

services

review, update the civil plans to include the clearance between all service crossings on Neon Consulting Drawing 026-2301-01-DRG-0006 to the satisfaction of the Chief Executive Officer prior to the Pre-Start Meeting.

Earthworks

5. Prior to Works Acceptance, complete all bulk earthworks within the development footprint and within the west verge of Old Port Road to the extent of the site frontage generally in accordance with the approved plans by Neon Consulting. Works must ensure a free draining surface is maintained with no ponding of standing water resulting to the satisfaction of the Chief Executive Officer.

Any amendments proposed to the existing finished surface profiles are to be identified and reported to Council prior to being undertaken on site. Resultant amendments shall be recorded on as constructed drawings to be submitted at the completion of the project.

6. Prior to the prestart meeting, the Contractor must provide a traffic management plan for delivery of materials to/from the development site in accordance with FNQROC construction Plan CP1.09.

Details must include how truck movements will be managed safely and with minimal disruption to road traffic including restriction on work in peak hours where appropriate. The traffic management plan must be approved by Council prior to works commencing on site.

Stormwater

7. Amend the driveway drainage to satisfactorily drain Lot 4-6 and the shared driveway access downstream from the property boundary, including a grated inlet pit inside the property per FNQROC Standard Drawing S1110. Alternative solutions may be considered providing the downstream drainage system is capable of adequately catering for the discharge of the modified flow concentrated by the driveway kerbing.

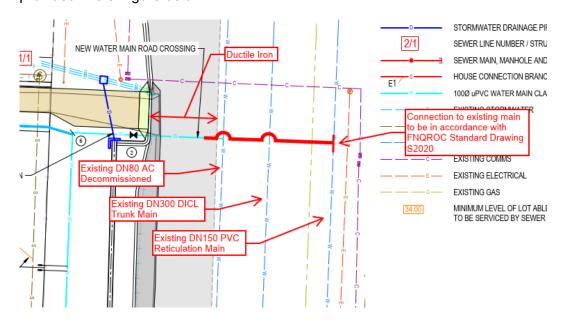

Detailed design drawings of all stormwater infrastructure required as a result of the development are to be provided to Council for endorsement prior to the Pre-Start Meeting.

<u>Advice Note:</u> The barrier kerb aligned along the edge of the common access will capture runoff from Lot 4-6 and the shared concrete driveway. No stormwater infrastructure is nominated to direct runoff from the shared driveway access to the downstream point of discharge.

- 8. At the drainage outlet from the culvert under the driveway, provide additional protection to contain runoff within the Type 1 concrete invert and minimise scouring of the earth cut batter immediately downstream. Amendments must be submitted and endorsed prior to request a Pre-Start Meeting.
 - <u>Advice Note</u>: Officers hold concern stormwater outletting from the new RCP may scour the cut batter surrounding the concrete drain invert during peak rainfall events.
- 9. Prior to the Pre-Start Meeting, increase the size of the proposed 375mm diameter RCP to a 450mm diameter RCP or provide additional information on how the culvert size provides the appropriate capacity.
 - <u>Advice Note:</u> The area of the three 225mm diameter drainage pipes intercepted north of the development by the 900x900 Everhard pit has a total area of 0.12m². However, a 375mm diameter pipe has an area of 0.11m². Council requires that an equal or greater discharge area be provided.
- 10. At all times, stormwater from the land must be directed to a lawful point of discharge such that it does not adversely affect surrounding properties or properties downstream from the development, in accordance with the Queensland Urban Drainage Manual.

Water Reticulation

11. The design plans show connection to a watermain which has been decommissioned. New watermain is to connect to the existing DN150 PVC reticulation main. The connection to the existing DN150 PVC reticulation main is to be in accordance with FNQROC Standard Drawing S2020. Details regarding sufficient clearance are to be provided. Refer figure below.

Amended water reticulation plan must be submitted and approved by the Chief Executive Officer prior to the Pre-Start Meeting.

12. Council must be contacted to perform or to under direct supervision for any direct connection to the live water main. Unless otherwise approved in writing, separate applications on the prescribed forms shall be made to Council for connections, together with payment of the relevant fee.

All connections are to be provided subject to the terms and conditions of Council's "Application for a Water Service Connection or Application for a Commercial Water Service, Fire Hydrant or Subdivision Connection" in the event Council undertakes the connection.

Water Supply and Sewerage Works

- 13. Provide a single internal water supply and sewer connection to each lot within the subject land in accordance with the FNQROC Development Manual.
- 14. Complete all water supply and sewerage works in accordance with Section D6 and D7 of the FNQROC Development Manual.

All works must be carried out in accordance with the approved plans to the requirements and satisfaction of the Chief Executive Officer prior to the lodgement for the signing and dating of the Plan of Survey.

Shared Services Trench

15. Provide water supply, telecommunications, and electrical services to Lot 4, 5 and 6 within a shared trench located in the common driveway access easement to the requirements and satisfaction of the Chief Executive Officer prior to Works Acceptance.

Allotment Access and Crossover

- 16. Construct a minimum 3m wide commercial concrete driveway, widened to 4.5m where shown on the approved civil plans, from Old Port Road to the eastern boundary of Lot 6 within the development. The driveway must be constructed in accordance with FNQROC Standard Drawings S1110.
- 17. Construct a 4.5m wide commercial concrete crossover to the shared driveway access to Lot 4-6 in accordance with FNQROC Standard Drawings S1015.

All works must be carried out to the requirements and satisfaction of the Chief Executive Officer prior to the lodgement for the signing and dating of the Plan of Survey.

Easement

- 18. Prior to the Pre-Start Meeting, update the civil plan/s clearly nominating the extent of the Access and Services easement over the shared driveway access off Old Port Road.
- 19. Prior to the lodgement for the signing and dating of the Plan of Survey, prepare for lodgement for registration at the Department of Resources (Titles Registry) an Access and Services easement over the shared driveway access in favour of Lot 4, 5 and 6 as identified on the approved civil plan(s) at no cost to Council.

External Works

- 20. Undertake works external to achieve the road and verge formation along the property frontage generally in accordance with approved civil plans by Neon Consulting. All works must be carried out to the satisfaction of the Chief Executive Officer prior to the lodgement for the signing and dating of the Plan of Survey.
- 21. Amend the civil plans to include a line marking plan clearly indicating the extent of new line markings and any existing line markings to be removed.

Internal Works

22. Associated bulk earthworks and provision of infrastructure required under the approval must be completed and provided in accordance with the approved plans prior to the lodgement for the signing and dating of the Plan of Survey.

Erosion & Sediment Control

23. All erosion and sediment controls nominated in the approved plan by Neon Consulting must be implemented prior to the discharge of water from the site such that no external stormwater flow from the site adversely affects surrounding or downstream properties (in accordance with the requirements of the *Environmental Protection Act 1994*, and the *FNQROC Development Manual*).

Erosion and sediment control measures must be maintained at all times to the requirements and satisfaction of the Chief Executive Officer.

24. Amend the Site Based stormwater Management Plan (Neon Consulting Drawing 026-2301-01-DRG-0008) to show the location of the construction access in accordance with the Institute of Public Works Engineering Australia Standard Drawing D-0040.

The location must be approved by the Chief Executive Officer prior to the Pre-Start Meeting.

General

- 25. Demolish/remove and dispose of all structures, concrete slabs and steel containers located within the development footprint except for the existing dwelling within Lot 4 as identified on Neon Drawing 026-2301-01-DRG-0004.
- 26. Remove the clothes line hoist and associated concrete path for the extent that these encroach into Lot 2.
- 27. Decommission all existing services within the development footprint except as specified by the approved civil plans to the satisfaction of the Chief Executive Officer prior to Works Acceptance.
- 28. Prior to Works Acceptance, any section of fence removed to enable operational works must be replaced to a quality equal to or better than the existing fence. The replaced section must match the material and height of the existing fence to the satisfaction of the Chief Executive Officer.

Road Condition Assessment

29. Prior to works acceptance, the Contractor is to prepare a road condition report identifying the condition of pavement infrastructure fronting the development site preand post-completion of works. The report is to identify relevant existing defects or problems with the roadway.

On completion of the works, the pavement infrastructure shall be subject to a joint inspection by the Applicant and Council Officers to identify any further damage that has occurred. Where additional damage has occurred, all rectification works shall be at the Applicant's expense, to the satisfaction of the Chief Executive Officer.

Vegetation Clearing

- 30. Existing vegetation within the verge of Old Port Road fronting the development is to be removed to the requirement and satisfaction of the Chief Executive Officer.
- 31. Council must be notified two (2) business days prior to the proposed date of commencement of any approved vegetation clearing to facilitate community awareness of such works.

Damage to Council Infrastructure

35. In the event that any part of Council's existing water, sewer or road infrastructure is damaged as a result of construction activities occurring on the site including, but not limited to, mobilisation of heavy construction equipment, and stripping and grubbing, the Applicant/Owner must notify Council immediately of the affected infrastructure and have it repaired or replaced at the Developer's/Owners/Builders cost prior to the approval and dating of the Survey Plan.
