

Tree Health and Condition Recommendation

After inspection of large Raintree over the restaurant at 5/31 Macrossan St, Port Douglas, we recommend removal due to tree impacting structures. Along with this, root systems are impacting both plumbing and storm water drains. Tree canopy is situated right above the restaurant and there have been several large limbs fail recently. Therefore, this tree is a liability to the public and patrons of the restaurant. As the tree and its canopy continues to spread, it will become a higher risk and have more potential for limb failure. I have completed an inspection of this tree and found no evidence of native wildlife or any threatened species of animals.

Thank you
