Development application CA-2025 5732/1 - Port Douglas Tourist Park and Workers
accom Lot 2 Captain Cook Highway

To the Assessment Manager,

With regard to development application no. CA - 2025 5732/1 Tourist Park & Workers
Accommodation Lot 2 Captain Cook Highway Port Douglas

We would like to register some concern for the impacts the development may have should it be approved.

These include the risks associated with both seasonal ground water inundation and the certain tidal rises expected with climate change, in an already low lying complex mangrove system. The effects of such a development on the natural flow of ground and surface water, with unchecked run off from rooves and roads entering the adjacent waterways must surely be considered to protect the surrounding ecosystems and any existing properties in the area.

We also have concerns with accessibility from the Captain Cook highway and the costly engineering aspects that creating a new, safe intersection will present.

Yours Sincerely,
