ASSESSMENT

Rural Residential Zone Code

Rural Residential Zone Code		
Performance Outcomes	Acceptable Outcomes	Comment
For assessable and self assessable development		
PO2 Buildings and structures are setback to maintain the rural residential character of the area and achieve separation from buildings on adjoining properties.	AO2 Buildings are setback not less than: (a) 40 metres from the property boundary and a State-controlled road; (b) 25 metres from the property boundary adjoining Cape Tribulation Road; (c) 20 metres from the boundary with any other road; (d) 6 metres from side and rear property boundaries.	The patio roof is to be constructed up to 1.8m from the side boundary. The proposed setback is consistent with the existing dwelling. Additionally, there is sufficient existing vegetation between the proposed patio and the neighbouring property to effectively screen the patio. Accordingly, the proposed location will not affect the rural residential character of the area.

PO1 A vulnerable use is not established or materially intensified within a bushfire hazard area (bushfire prone area) unless there is an overriding need or other exceptional circumstances.	AO1 Vulnerable uses are not established or expanded.	The proposal is not a vulnerable use.
AO2 Emergency Services and uses providing community support services are not located in a bushfire hazard sub-category and have direct access to low hazard evacuation routes. PO3 Development involving hazardous materials	AO3 The manufacture or storage of hazardous material in bulk	NA

manufactured or stored in bulk is not located in bushfire hazard sub-category.	does not occur within bushfire hazard sub-category.	
<p>PO10</p> <p>Development is located and designed to ensure proposed buildings or building envelopes achieve a radiant heat flux level at any point on the building or envelope respectively, of:</p> <p>(a) 10kW/m² where involving a vulnerable use; or</p> <p>29kW/m² otherwise.</p> <p>The radiant heat flux level is achieved by separation unless this is not practically achievable.</p> <p>Note - The radiant heat levels and separation distances are to be established in accordance with method 2 set out in AS3959-2009.</p>	<p>AO10</p> <p>Buildings or building envelopes are separated from hazardous vegetation by a distance that:</p> <p>(b) achieves a radiant heat flux level of at any point on the building or envelope respectively, of 10kW/m² for a vulnerable use or 29kW/m² otherwise; and</p> <p>is contained wholly within the development site.</p> <p>Note - Where a separation distance is proposed to be achieved by utilising existing cleared developed areas external to the site, certainty must be established (through tenure or other means) that the land will remain cleared of hazardous vegetation.</p> <p>For staged developments, temporary separation distances, perimeter roads or fire trails may be absorbed as part of subsequent stages.</p> <p>Note - The achievement of a cleared separation distance may not be achievable where other provisions within the planning scheme require protection of certain ecological, slope, visual or character features or functions.</p>	<p>The proposed development has sufficient separation distances from vegetation so as to achieve compliance.</p>
<p>PO11</p> <p>A formed, all weather fire trail is provided between the hazardous vegetation</p>	<p>AO11</p> <p>Development sites are separated from hazardous vegetation by a public road</p>	<p>The nearby vegetation is not considered hazardous.</p>

<p>and the site boundary or building envelope, and is readily accessible at all times for the type of fire fighting vehicles servicing the area.</p> <p>However, a fire trail will not be required where it would not serve a practical fire management purpose.</p> <p>Note - Fire trails are unlikely to be required where a development site involves less than 2.5ha</p>	<p>or fire trail which has:</p> <p>(c) a reserve or easement width of at least 20m;</p> <p>a minimum trafficable (cleared and formed) width of 4m capable of accommodating a 15 tonne vehicle and which is at least 6m clear of vegetation;</p> <p>no cut or fill embankments or retaining walls adjacent to the 4m wide trafficable path;</p> <p>a minimum of 4.8m vertical clearance;</p> <p>turning areas for fire-fighting appliances in accordance with Queensland Fire and Emergency Services' Fire Hydrant and Vehicle Access Guidelines;</p> <p>a maximum gradient of 12.5%;</p> <p>a cross fall of no greater than 10 degrees;</p> <p>drainage and erosion control devices in accordance with the standards prescribed in a planning scheme policy;</p> <p>vehicular access at each end which is connected to the public road network which is connected to the public road network at intervals of no more than 500m;</p> <p>designated fire trail signage; if used, has gates locked with a system authorised by Queensland Fire and Emergency Services; and</p> <p>if a fire trail, has an access easement that is granted in favour of Council and Queensland Fire and Emergency Services.</p>

<p>PO12 All premises are provided with vehicular access that enables safe evacuation for occupants and easy access by fire fighting appliances.</p>	<p>AO12 Private driveways: (d) do not exceed a length of 60m from the street to the building; do not exceed a gradient of 12.5%; have a minimum width of 3.5m; have a minimum of 4.8m vertical clearance; accommodate turning areas for fire-fighting appliances in accordance with Queensland Fire and Emergency Services' Fire Hydrant and Vehicle Access Guidelines; and serve no more than 3 dwellings or buildings.</p>	<p>Proposal complies.</p>
<p>PO13 Development outside reticulated water supply areas includes a dedicated static supply that is available solely for fire fighting purposes and can be accessed by fire fighting appliances.</p>	<p>AO13 A water tank is provided within 10m of each building (other than a class 10 building) which: (e) is either below ground level or of non-flammable construction; (f) has a take off connection at a level that allows the following dedicated, static water supply to be left available for access by fire fighters: (i) 10,000l for residential buildings Note – A minimum of 7,500l is required in a tank and the extra 2,500l may be in the form of accessible swimming pools or dams. 45,000l for industrial buildings; and 20,000l for other buildings; includes shielding of tanks and pumps in</p>	<p>There is reticulated town water supply connected to the site.</p>

	<p>accordance with the relevant standards;</p> <p>includes a hardstand area allowing medium rigid vehicle (15 tonne fire appliance) access within 6m of the tank;</p> <p>is provided with fire brigade tank fittings – 50mm ball valve and male camlock coupling and, if underground, an access hole of 200mm (minimum) to accommodate suction lines; and</p> <p>is clearly identified by directional signage provided at the street frontage.</p>	
<p>PO14</p> <p>Landscaping does not increase the potential bushfire risk.</p>	<p>AO14</p> <p>Landscaping uses species that are less likely to exacerbate a bushfire event, and does not increase fuel loads within separation areas.</p>	Noted.
<p>PO15</p> <p>The risk of bushfire and the need to mitigate that risk is balanced against other factors (such as but not limited to, biodiversity or scenic amenity).</p>	<p>AO15</p> <p>Bushfire risk mitigation treatments do not have a significant impact on the natural environment or landscape character of the locality where this has value.</p>	Noted.
