

WATER FLUSHING

SAFE WATER

WHY DO WATER FLUSHING?

If you see a hydrant running, it isn't the Water Team wasting water. They are actually working hard to make sure you have safe drinking water. Flushing of water lines is essential to keeping your water safe and maintaining the integrity of a pipe network. Turning off the hydrant whilst flushing is in progress may cause issues with the water quality, and could affect public health.

Contact Council's frontline staff on **4099 9444** if you have any questions relating to flushing activity in the Douglas Shire.
